Televés

UHF Antenna DAT75

Ref. 1097

Televés launches its new UHF antenna, the **DAT75 ref. 1097**, that substitutes the PRO75, ref. 1046.

It has two clamps, a reflector, a dipole, an antenna box, an especially designed impedance adaptor circuit, an F connector and a sleeve to protect it from the rain.

■ Clamps: The system now has two clamps so that the antenna is more firmly fixed to the mast, making the installation more secure.

■ Reflector: We have improved the way that the reflector is fixed to the antenna so that it is more robust and easier to install.

■ Antenna box: This is shielded, so that it provides greater protection against the impulsive noise. It also comes with an especially designed impedance adaptor circuit.

■ Output F connector: The antenna box features an output F connector, as well as a sleeve that protects it from the rain.

■ This antenna also features a new series of plastic pieces used to support the dipole and the structure in general with a new attractive appearance.

■ The DAT75 antenna can also be used with our MRD (Margin Rising Device), ref. 5050, which eliminates the impulsive noise, and improves the technical specifications.

Bandwidth (frequency)	MHz	Channels 21 - 69 (470 - 862)
Gain	dB	19
Front-to-back ratio	dB	28
Hor. opening angle	°	27
Vert. opening angle	°	32
Polarisation		Horizontal / Vertical (lineal)
Length	mm	1.825
Number of elements		75
